1908—1951

Once again we are pleased to greet our many customers, both old and new. We thank them heartily for their patronage. We especially thank those who have recommended our plants to their neighbors and friends.

For 43 years we have been growing and shipping strawberry plants, starting in 1908 in a small way. The business has increased from a few thousand plants the first year, until now we are shipping plants to all the northeastern states. The land here is ideal for growing plants, a light sandy loam, which causes the plants to go down deep into the soil, making very large roots that are sure to grow. We grow all our own plants and if we should be sold out of any variety, we say so, never buying from anyone to fill your order as some growers do. In digging plants we dig the whole row, discarding all small plants, also the old or mother plants. Our plants are all dug after your order is received, taken to the packing room, cleaned and trimmed, ready to set out in the field. This trimming of the plants makes them very easy to set out and saves you much time and labor, just when you are rushed with your Spring work.

Trusting that we shall continue to receive a share of your patronage and hoping that this will be a successful and prosperous year for you, we are

Very truly yours,

THE GEORGE RENNIE FARM

Wallace Rennie, Owner.

BRIEF CULTURAL DIRECTIONS FOR THE BEGINNER

Soil. Almost any land that will grow corn will grow strawberries.

When to Plant. The earlier in the Spring the better. As soon as you can prepare the ground in good shape so the Spring rains will give the plants a good start. Plants do best when set before they start to grow very much.

Preparing the Ground. Spade or plow under a good coat of barnyard manure, then harrow till it is nice and mellow. If barnyard manure can't be had you can use hen manure or a 4-12-4 fertilizer, 1,000 lbs. to the acre spread broadcast, then harrow it in.

Planting Distance Apart. We recommend making the rows four feet apart and setting the plants 18 to 30 inches in the row, depending on the variety and the fertility of the soil. On good land vigorous plants set at 24 to 30 inches between plants will make a good fruiting row. You will get a bigger yield and the berries will be fancier than if the plants were set nearer and allowed to mat too close. This will also make the initial cost of your planting lower.

Setting the Plants. A good many strawberry growers use a spade to make the holes to set the plants in, one man to make the holes and another to set the plants. Others use a mason's trowel Push it straight down in the ground, then push back and forward, this makes a V shaped opening. Hold the plant with the left hand while you fill in the earth with right, then firm the earth around the plant. Be sure to set plants very firm in the

ground. More plants die every year from being set too loose in the ground than all other causes combined. Great care should be taken to set the plant at the right depth, with the crown of the plant even with the surface of the ground.

Picking Blossoms from New Set Plants. The standard or June bearing varieties are not expected to produce a crop the year they are planted. The blossom stems should be pinched from all plants as soon as they appear. This throws the strength into the plant and makes strong, healthy plants that will grow a big crop of fruit the following season. Everbearing varieties should have all blossoms picked off until July 1st of the first year. This will give you berries during late Summer and Fall the year they are planted.

Cultivation. We recommend shallow cultivation as soon as the plants are set. This levels the ground and holds the moisture. Cultivation should be kept up right through the growing season. About the last of November plants should be covered with two inches of meadow hay, rye straw or pine needles, or any covering you may have handy provided it is free from weed seeds.

Profit and Pleasure in Growing Strawberries. Strawberries yield quicker returns than any other fruit crop. With no other fruit crop can you set plants or trees one Spring and harvest a full crop of fine fruit the next Spring. "Strawberries bring in early money." They are one of the first crops to be harvested in the Spring. They bring in money when most needed just after a hard Winter. No other crop has brought the farmer as much profit during the past few years as the strawberry crop.

STANDARD VARIETIES

Howard 17, (Per.) Early. Since the Howard was introduced in 1915 it has replaced all other early berries. Its great productiveness, large size, nice color and smooth even shape puts it in a class by itself. The Howard 17 is the variety that all new varieties are judged by. Growers have made more money with Howard 17 than any other variety.

Here is a list of some of the good points of Howard:

(1) Soil. Howard does well on any kind of soil, and in any climate, out-yielding all other varieties.

(2) The plants are very productive. No other variety yields more quarts per acre.

Take notice when you are picking off the blossoms from your newly set plants, you will have two, three or four fruit stems to pick off the Howard plants; on most other varieties you will have only one or two stems to pick off.

(3) The berries are beautiful in appearance, having a bright, glossy color, a berry that looks good in the box or in the crate. Howard and Catskill are the only fancy berries that are a market berry; all the other fancy berries are poor yielders.

(4) Howard berries are of a large size and hold their size well throughout their long bearing season, a very easy berry to pick as it has no green points. We have one of the best strains of Howard 17 in New England, as we use only the best plants in our breeding beds.

6 GEORGE RENNIE FARM, ANDOVER, MASS.

The Howard should not be allowed to set too many plants, as after heavy rains they will not dry off. Berries will be soft and there will be some rot. Keep plants well spaced. This gives them a chance to dry off after rain.

We set out more Howard 17 plants than all other varieties combined and still we get sold out on them most every year. To make sure of getting the plants you want, send your order in early. Don't wait until late in the season. Send a small remittance with your order, balance when you want plants shipped.

PREMIER EXTRA EARLY

We have always believed Howard 17 and Premier to be of the same variety. However, some of our customers have purchased the plants under the name of Premier. We purchased our Premier plants from a leading Michigan grower, and any of our customers may have the true Premier by ordering them under that name.

Prices same as Howard 17.

ROBINSON (Scarlet Beauty) Per.

Robinson, also known as Scarlet Beauty, is a medium size plant with long root system and is a vigorous grower. They should not be set closer than 30 inches between plants to help keep them from crowding.

The berries are a brilliant red color, have honey-sweet flavor and are very large and firm and keep their size until the end of the picking season. Include a few Robinson in your order this Spring and compare them with your Howard 17 or Catskill.

CATSKILL (Per.) Midseason

The Catskill is a midseason berry; ripens about a week after the Howard 17. A cross of the Marshall and the Howard 17, the plants are large, very vigorous and yield very heavy crops. The berries are very large, firm, bright red in color, glossy and attractive, and good quality. The bright shiny red berries make an attractive package in the basket or in the crate. The berries are so large they should be sold in trays, rather than in crates. On rich land the Catskill makes too many plants and should not

be allowed to set too many as we find the largest and finest berries are always where plants are fairly wide apart. The Catskill keeps good size to the last picking and to be at its best should have fairly heavy and rich land. Anyone growing for market cannot go wrong in planting Howard 17 for early and Catskill for midseason to late. The berries are produced on strong stems that keep the berries up off the ground. They dry off after heavy rain and you get very few rotten berries. Not quite as heavy a cropper as the Howard 17, the Catskill is getting to be better known now. Every year we increase our planting of Catskill. Plant the Howard 17 on the light to medium land and the Catskill on the heavy land.

SPARKLE (Per.)

Sparkle is a midseason to late berry that was recently introduced by the New Jersey Experiment Station. It is a vigorous grower (plants should not be set closer than 30 inches in rows) and heavy yielder of medium size berries. The berries are of the highest quality and have a sparkling ap-

pearance. This variety is recommended for freezing.

FAIRFAX (Per.)

At the request of some of our customers we are offering Fairfax again this year.

It is an early ripening berry, very firm and one of the sweetest berries grown. It is a low yielding variety and we recommend it only to home gardeners who prefer quality rather than quantity.

GEM EVERBEARING (Per.)

We have tried most of the everbearing varieties and we consider Gem to be one of the best.

Introduced to the trade in 1934, Gem makes a very vigorous growth of medium sized plants. The foliage is very healthy with no leaf spot. The berries average large in size, are bright red in color, very showy and attractive in the box and very firm. The Gem does well grown in the hill system or narrow row. For the narrow row set plants 18 inches apart in the row, with rows 3½ feet apart and let each plant make six to eight runner plants. A good berry for home use or market.

Gem plants should be set as early as you can prepare the land in good shape. Keep all blossoms picked off until July 4th. They should start to fruit about August 1st and continue to fruit until last of October. They will also bear a crop the next Spring. They should then be plowed under, as they don't fruit enough to bother with the second Fall.

1,000	Plants 25.00	24.50	

We use pint baskets for marketing our Everbearing berries. We find they sell better than in quart baskets.

SUPERFECTION EVERBEARING (Per.)

Superfection was originated in Michigan by the same man who brought out Gem. It is similar to Gem in many ways. With us Superfection set a heavy crop of berries in the Fall and they held their size well. To have fresh berries during August, September, and October, we would suggest that you plant a few Superfection this Spring
Prices same as Gem.

NOTICE

We do not have strawberry plants for sale in the Fall.. We find that plants set in the Spring usually start to grow faster and are easier to take care of. There is also a danger that Fall set plants may winter kill.

How to Reach Our Farm by Automobile

Come to Andover Square, then go down Central Street and under the railroad bridge, keep to the left, then first right. Our farm is the ninth house on the right on Argilla Road.

ORDER YOUR PLANTS EARLY

Due to the dry period we had last year their will be a heavy demand for plants this Spring. We were fortunate that our plants had made a very good growth early in the season and we have an ample supply and hope to have enough to fill all orders sent to us.

When your order is received by us it is booked and the plants are reserved in the fields until the time you want them. We estimate the number of plants we believe we have in the fields and as soon as we have booked this amount we are forced to refuse any more orders. Later in the season as our back orders are filled we sometimes have a few more plants and start taking a few more orders again. This may explain to some who had their orders refused and later find a neighbor or friend was able to get plants much later in the season from us. We try to play no favorites and treat all our customers the same.

The next two or three years should be very profitable for the man who has the time to give good care to his strawberry plants. Fancy berries sold in Andover last year at very good prices, and stores could not get enough of them to supply their trade. It will take you no longer to plant, cultivate and harvest your berries at these good prices than when they are sold for much less and therefore your margin of profit will be much larger per quart than ever before.

Again we say, if you are planning to order some of our plants won't you place your order early so we may reserve your plants for you.

Commonwealth of Massachusetts

STATE DEPARTMENT OF AGRICULTURE

Official Certificate No. 109

Boston, July 28, 1950

To Whom It May Concern:

This is to certify that I have this twenty-seventh day of July completed the inspection of the strawberry stock of George Rennie Farm grown at Andover, State of Massachusetts, and find it to be apparently free from all injurious insects and diseases which might be transferred on nursery stock from the nursery to the orchard or garden.

This certificate good until July 1, 1951.

Inspected by T. J. Army

(signed) Q. S. Lowry,
Assistant Director.

SPACING OF PLANTS

Most growers allow far too many plants to set in the row. We believe that the largest crops of the finest berries can be grown in rows two and a half to three feet wide with runner plants spaced seven or eight or even nine inches apart. Any plants that set closer than this should be treated as weeds and should be cut out with the hoe when hoeing the plants. Have one end of the hoe very sharp for this purpose. In the matted row you will find the most and largest berries are at the side of the rows. That is because they have more moisture than plants in the middle of the rows. In the spaced rows they have all the moisture they need to make large fruit. In the spaced rows you have very little rot as they dry off better after rain. You also get larger berries in a dry season. We have a customer on the North Shore that set out 500 Howard 17 plants. He allowed each plant to make only eight

You will do us a favor by showing this catalogue to your friends.

runners spaced nine inches apart and he picked from the 500 plants 1300 quarts of berries. Many of the growers in that town are following his system now. Some growers may think this is too much work. Suppose you try spacing the plants in two or three rows and compare with the rest of your bed.

HOW WE PREPARE OUR LAND FOR STRAWBERRIES

We plant one quarter of our land to strawberry plants every year. Every Fall the land that is not in strawberries is planted to Winter rye. This is plowed under in the Spring, about the middle of June. Then we plant buckwheat and this is plowed under when it starts to form seed. This keeps the land well filled with humus and holds the moisture. When a dry time comes the plants will never show it.

We fertilize with hen manure mostly and stable manure when we can get it. This is plowed under in the Fall. The land is plowed again in the Spring, then harrowed until it is nice and mellow and ready for planting. We always get our plants set out between the first and twentieth of April. About two weeks after planting we use a 4-12-4 fertilizer to start the plants, a handful to every five or six plants, then hoe it in.

Order your plants early. A small remittance is all that is required with your order. Send balance when you want plants shipped.

George Rennie Farm
Andover, Mass.

Gentlemen:

Please send me 25 Howard 17 plants and 50 Catskill plants just as soon as you can get them in the mail as I believe they can be set right away don't you?

Like your plants so much. The first time I tried your method of allowing each plant to make only 8 runners, none nearer than 9 inches, we got 130 quarts from 75 plants, during the height of the season, and never did count the few boxes we picked at the last of the season. Wonderful way to handle them.

Sincerely,
(Signed) P. O. WHITNEY

August 12, 1950

George Rennie Farm
Andover, Mass.

Dear Mr. Rennie:

The Catskill plants I bought of you last year were the finest plants I ever set.

From 200 plants I picked 403 quarts of the finest berries ever raised.

This probably is no record, but I certainly was pleased with my crop.

Very respectfully,
(Signed) RALPH D. WALDRON

84 Saxton River St.
Bellows Falls, Vt.
April 27, 1950

George Rennie Farm
Andover, Mass.

Dear Sirs:

Is it too late to order 100 Catskill plants?

If you haven't the Catskills we would like Howard 17, but we prefer the Catskill. We had 100 two years ago which did very well and were exceptionally good fresh-frozen.

I hope I am not too late in ordering.

Respectfully,
(Signed) CLAYTON A. BARROWS

Oakland, Maine
May 3, 1950

George Rennie Farm
Andover, Mass.

Dear Sirs:

Please reserve for us 250 Howard 17 and 250 Catskill strawberry plants. Enclosed please find part payment and the balance will be sent before the order is to be shipped. We would like them here Saturday, May 27th. Should have ordered these before.

Have always had good luck with your plants.

Yours truly,
(Signed) MRS. ARCHIE C. TOWLE

Be Your Order Large or Small, We Will Treat You "On the Square"

Terms—Cash must accompany all orders. No plants shipped C. O. D.

How to Remit—Post Office, Express, Money Order, Registered Letter or Bank Draft.

Claims—Must be made on receipt of plants, so that mistakes (should any have been made), may be promptly corrected.

All plants are fresh dug when wanted, kept away from both sun and wind, taken to the packing room to be **trimmed** ready for planting; tied in bunches of 26, labeled and set in moss in light boxes or crates, and delivered to the post office or express office at Andover, Mass.

We take the greatest care to have all plants true to name and in case any should prove otherwise we will not be liable for any amount greater than paid us for the plants.

Orders should be sent as soon as possible and your order will be booked and shipped when wanted.

A card will be sent notifying you when plants are shipped by express, so you can be on the lookout for them.

GEORGE RENNIE FARM, Andover, Mass.
